Research Fields Environments for children's growth, Landscape Design

Keywords Children, facility Planning, landscape, Urban Design

● Research Outline

The creation of the place for children's learning in the region.

Children's cannot choose own living place and the environment. In order that children grow up splendidly, it is important that an opportunity to receive education is equal. However, in present Japan, the opportunities of children's learning in the region had a difference in municipalities. Giving the environment of a children's learning in the region will make not only the human relations of a school but two or more senses of values. The child have own confidence and the meaning of the existence by obtaining evaluation from the others. That is, it is important that there are the opportunity and place of learning other than a school. Therefore, I am studying the situation and facilities of the children's learning in the region.

Landscape design with spatial image .

The landscape and space which people memorize carefully are located in a street. It is important to keep them to future generations. Moreover, in order to continue them, it is required to discover the value in a livelihood. Therefore, I have two keywords.

- (1) The landscape as attractiveness of space.
- (2) The Space shape of a streetscape.
